DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I in Paper No. 7 is acknowledged.

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification. For example, page 17, last line —received—is misspelled.

Claim Rejections - 35 USC § 112

Claims 20-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. What process steps are being positively claimed in these claims? Claim 31 is confusing and should be rewritten.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-28,33-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) or Liversidge et al in view of Hiersche et al. APA is the process discussed in the first few pages of the specification. This process and the Liversidge et al process form powdered material for drugs including the milling of the

material in a stirring mill. Apparently the use of typical drive means creates all sorts of problems such as leakage, contamination, etc. Hiersche et al solves this problem by disclosing a similar process including the use of magnetic drive means; note column 4, lines 8-13. In order to prevent problems caused by typical drive means, it would have been obvious for one of ordinary skill in the art at the time of the invention to modify APA or Liversidge et al by using magnetic drive means, taught to be desirable by Hiersche et al. The remaining limitations of the claims appear to be known or obvious modifications in the drug material forming art as they solve no stated problems. If this is incorrect, applicants should specifically point out the features in the dependent claims that are believed to be allowable over the art of record.

Allowable Subject Matter

Claims 29-32 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
